Heart Rate: 72 bpm

Respiratory Rate: 16 bpm

Temperature: 36.7 °C

Oxygen Saturation: 98%

Lifestyle Assessment

Smoking Status: Never

Alcohol Consumption: Rarely

Diet Preference: Diabetic-friendly

Exercise Habits: Mild

Doctor's Notes & Recommendations

Subjective: Patient reports stable blood sugar levels and controlled peripheral neuropathy symptoms with current medication regimen. Reports following a diabetic-friendly diet and mild exercise routine. Denies any recent episodes of hypoglycemia or hyperglycemia. Complains of occasional tingling in feet.

Assessment: Patient presents with well-managed Type 2 Diabetes Mellitus and stable Peripheral Neuropathy. Lipid profile and renal function are within acceptable ranges. ECG shows no significant abnormalities.

Plan/Recommendations: Continue current medication regimen. Reinforce adherence to diabetic diet and exercise plan. Consider adjusting Gabapentin dosage if tingling becomes bothersome. Consider physical therapy consultation for neuropathy.

Follow-Up: Schedule follow-up appointment in 3 months for HbA1c and CMP monitoring. Return sooner if any new symptoms arise.

Current Medications

Medication	Dosage	Frequency
Metformin	500mg	Twice daily
Gabapentin	300mg	Three times daily
Atorvastatin	20mg	Once daily
Lisinopril	10mg	Once daily
Vitamin B12	1000mcg	Once daily
